Sandia National Laboratories: Research: R&D 100 Awards Computational electromagnetics - Wikipedia Computational electromagnetics, computational electrodynamics or electromagnetic modeling is the process of modeling the interaction of electromagnetic fields with physical objects and the environment.. It typically involves using computationally efficient approximations to Maxwell's equations and is used to calculate antenna performance, electromagnetic compatibility, radar cross section and ... Evanescent field - Wikipedia In electromagnetics, an evanescent field, or evanescent wave, is an oscillating electric and/or magnetic field that does not propagate as an electromagnetic wave but whose energy is spatially concentrated in the vicinity of the source (oscillating charges and currents). Even when there in fact is an electromagnetic wave produced (e.g., by a transmitting antenna), one can still identify as an ... Electromagnetics Modeling in COMSOL Multiphysics Electromagnetics Modeling in COMSOL • RF Module – High-frequency modeling – Microwave Heating • AC/DC Module – Statics and low-frequency modeling Scalar Wars The Brave New World of Scalar Electromagnetics So the layman will need to understand that there is a new kind of electromagnetic energy that is altogether different from what he knows, e.g. radio, TV, cell phones, etc. The ordinary EM waves that we have known about are called transverse EM waves, to distinguish them from the new longitudinal EM waves. These scalar waves do not actually exist in our "material" world, but exist only in the ...
